

Large Style Heavy Duty Handles

Suitable for all types of vehicles and substantial mechanisms. These handles have been created to provide a smart, modern design, much larger and stronger than any other currently available. At the same time they incorporate many features; in particular the mounting holes which are completely hidden and inaccessible when handles are in 'locked' position. A point of weakness in most handles is the 'boss' at the base of the main casting, which is prone to fracture around the steel shaft. With our new models the metal sections are more than twice as thick as usual, vastly increasing load-bearing capacity.

3.9/01037

Full length (185mm) locking handle.
Fitted with 8mm square shaft.

3.9/01037/01

Keyed FT111. Fitted with 8mm square shaft.

3.9/01038

Full length (185mm) non-locking handle.
Fitted with 8mm square shaft.
